TECHNICAL SKILLS

Languages: Java, Python, SQL, Go, JavaScript, TypeScript, HTML, CSS, C, C++, Bash, R, LaTeX, Haskell, Prolog
Technologies & Tools: React, Vue, Spring Framework, Spring Boot, Git, GitHub, GitLab, Flask, Maven, Unity, Azure, Tailwind, Postman, JUnit, Pytest, PostgreSQL, MySQL, SQLite, Command Line Interface, UNIX, PowerShell
General: Data Structures and Algorithms, Object-Oriented Programming, Databases, Software Design, AI & ML, Software Architecture, Operating Systems, Debugging, Documentation, Testing, Teamwork, Project Management

EDUCATION

Queen's University

Bachelor of Computer Science (Honours)

Sept 2022 – Apr 2026

Kingston, Ontario

EXPERIENCE

Full-Stack Software Developer

Elara Global Taiko Server

May 2024 – Aug 2024

Toronto, Ontario

- Developed a full-stack web application using Vue, TypeScript, Go, and SQLite for a game development team, focusing on user customization features and in-game authentication resulting in 56% increased users.
- Implemented a secure RESTful API in Go for user authentication and data handling, optimizing both security and performance in handling information reducing security threats by 100%.
- Enhanced web page performance by reducing first-load file size by 89%, improving user experience for global users.
- Accelerated average web page load time by 92%, contributing to smoother and faster system performance.
- Designed and styled visually appealing user interfaces using Tailwind CSS and Vue resulting in 70% increased user satisfaction.
- Optimized SQL queries and CRUD operations across multiple SQLite databases, reducing query execution time by 45% and ensuring 100% data integrity for datasets exceeding 125,000 records.
- Participated in regular code reviews, adhering to coding standards and improving overall code quality resulting in 33% reduced bugs.
- Maintained codebase integrity using Git and GitHub, following best practices in version control and documenting commit histories.

PROJECTS

Password Manager Chrome Extension | *TypeScript, React, Java, Spring Boot, PostgreSQL, HTML, Tailwind CSS*

- Developed a full-stack password manager web application and Chrome extension, featuring secure user authentication, password storage, and a RESTful API built with Java Spring Boot.
- Designed a React-based frontend to provide a seamless user experience with password generation and auto-fill functionality, enhancing login efficiency and convenience by reducing login time by 95%.
- Deployed the application on Azure Spring Apps, using Azure Database for PostgreSQL for scalable and secure data management ensuring 99.9% uptime.
- Integrated AES encryption for secure password storage of over 100+ passwords, with BCrypt hashing via Spring Security for user authentication.

Pharmacy Management System | *Python, Flask, SQLite, Pytest, Selenium, Git, HTML, CSS*

- Built a full-stack pharmacy management system using Python, Flask, and SQLite enabling efficient management of prescriptions, inventory, and order placement for pharmacy operations.
- Created intuitive web interfaces using HTML and CSS, and a streamlined database in SQLite improving workflow efficiency for pharmacy staff, reducing task completion times by 40%.
- Collaborated on requirements gathering and testing, ensuring the system met functional and non-functional requirements while achieving 100% alignment with stakeholder needs.
- Performed robust unit testing and achieved 100% code coverage using Pytest, identifying and resolving potential edge cases during development.
- Conducted integration testing with Pytest and end-to-end system testing with Selenium, validating over 50 test cases across workflows such as prescription management, inventory updates, and user authentication, resulting in a 36% reduction in bugs during production.
